                                                                                                                                                                                                                                                                                     The present sequence encodes human subtilisin-kexin isoenzyme 1 (SKI-1), at type-1 membrane-bound proteinase. The nucleotide sequence was isolated from the human neuronal cell line IMR-32 by RT-PCR using active site degenerate primers. SKI-1 cleaves at a specific threonine residue within the N-terminal segment of human pro-brain-derived neurotrophic factor (proBDNF). It is also capable of cleaving sterol-regulatory element-binding proteins (SREBPS), which function to control lipid cleament-binding proteins (SREBPS), which function to control lipid cleaved by SKI-1 may be used for monitoring SKI-1 activity, for screening inhibitors of SKI-1 activity, or for screening enhancers of SKI-1 catalytic site may be used for monitoring bind to the SKI-1 catalytic site may be used as inhibitors of SKI-1 activity. They may catalytic site may be used as inhibitors of SKI-1 activity. They may substrate. Such diseases involving overexpression of SKI-1 or SKI-1 substrate. Such diseases include hypercholesterolaemia, high levels of fatty acids, lipids or farnesyl pyrophosphate, liver steatosis,

                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                           80
                                                                                  Human site-1 protease promoter region for identifying agents capable of inhibiting the promoter activity useful in treating medical conditions such as obesity, diabetes, atherosclerosis and hypercholesterolemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human site-1 protease (SIP) promoter region. The promoter sequence is useful for identification of compounds that inhibit transcription of SIP, which in turn results in inhibition of sterol regulatory element-binding protein (SREBP) pathway. The compound identified is useful for the treatment of medical conditions related to obesity, type II diabetes, hypercholesterolaemia, dyslipidaemia, atherosclerosis and other cardiovascular diseases. The present sequence is human SIP DNA.
                                                                                                                                                                                                                                                                                                                              21 LeuGlyAspArgLeuGluLysLysSerPheGluLysAlaProCysProGlyCysSerHis

ncodes rat subtilisin-kexin isoenzyme 1 (SKI-1),
d proteinase. The nucleotide sequence was isolated
s by RT-PCR using active site degenerate
are specific threonine residue within
of pro-brain-derived neurotrophic factor
capable of cleaving sterol-regulatory
s (SREBPS), which function to control lipid
s in animal cells. Peptides which bind to and are
s used for monitoring SKI-1 activity, for screening
thivity, or for screening enhancers of SKI-1
stivity, or for screening enhancers of SKI-1
sed as inhibitors of SKI-1 activity. They may
see involving overexpression of SKI-1
farnesyl pyrophosphate, liver steatosis,
                                            PIGGAGGGATCATGCCTGGCCGCTACAACCAAGAGGTGGGCCAG 3386
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gment of subtilisin-kexin isoenzyme for

```
The present sequence encodes mouse subtilisin-kexin isoenzyme 1 (SKI-1), a type-1 membrane-bound proteinase. The nucleotide sequence was isolated from mouse corticotrophic cells by RT-DCR using active site degenerate primers. SKI-1 cleaves at a specific threonine residue within the N-terminal segment of pro-brain derived neurotrophic factor (proBDNF). It is also capable of cleaving sterol-regulatory element-binding proteins (SREBS), which function to control lipid biosynthesis and uptake in animal cells. Peptides which bind to and are cleaved by SKI-1 may be used for monitoring SKI-1 activity, for screening inhibitors of SKI-1 activity, or for screening enhancers of SKI-1 activity. Proteic fragments of SKI-1 which bind to the SKI-1 catalytic site may be used as inhibitors of SKI-1 activity. They may be used to treat diseases include hypercholesterolaemia, high levels of substrate. Such diseases include hypercholesterolaemia, high levels of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel soluble proteic fragment of subtilisin-kexin isoenzyme for producing a polypeptide useful for treating hypercholesterolemia, liver steatosis and amyloidosis, comprises a specific amino acid sequence -

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB80040-ABB90044) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardivascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epidepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                       Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antideterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ID NO 1226; 2081pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   674 G; 686 T; 5 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2729

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of Drosophila melanogaster DNA encoding dSIP (see AAB20015), a homologue of mammalian site 1 proteases (SIP) that are involved in sterol regulatory element binding protein (SREBP) processing, cleaving SREBP at the lumenal cop. SREBPS are transcription factors that activate genes involved in cholesterol and fatty acid synthesis, and are major mediators of insulin action in the liver. Alterations in SREBP function and expression are implicated in obesity and insulin consistance. The dS2P DNA was identified from an expressed sequence tag database search on the basis of homology to hamster S2P. The invention provides fly and nematode (Caenorhabditis elegans) polynucleotides (see AAB9207-90) and encoded proteins (see AAB20012-15) involved in the SREBP pathway. C. elegens and D. melanogaster animals genetically modified to express or mis-express these proteins are claimed. These genetically modified animal models have proteins are claimed. These genetically modified animal models compounds capable of modulating lipid biosynthetic pathways. Model compounds capable of modulating lipid biosynthetic pathways. C. claiming targets, therapeutic agents, diagnostics and prognostics of disorders associated with lipid metabolism, and also to identify performed by the proteins of the SREBP pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        86

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LysGluLysGlnLysAlaGly------LeuLeuThrLeuGluAspHisProAsn 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LeuArgArgAlaSerLeuSerLeuGlySerGlyPheTrpHisAlaThrGlyArgHisSer 181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AspProThrValProCysAsnGluThrArgTrpSerGlnLysTrpGlnSerSerArgPro 161
                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and insectiodes, therapeutics in higher eukaryotes for the development of insectiodes, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA
                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PheSerSerThrValValGluTyrGluTyrIleValAlaPheAsnGlyTyrPheThrAla

XX PA (PEKE) PE CORP NY. XX XX YX		The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is cuseful in developmental biology and in elucidating cell signalling and call-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention cc discloses genomic DNA sequences (ABLIG176-ABLIG011), expressed DNA cequences (ABLIG176-ABLIG011), and the encoded proteins	C The sequence data for this patent did not form part of the printed comparation, but was obtained in electronic format directly from WIPO C at ftp.wipo.int.pub.published_pct_sequences. biological sample isolated from a subject with an agent that specifically
         binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                          62

The present invention describes a library of human polynucleotides comprising the sequences given in AA212532 to AA21779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AA21253 to AA21779. The polynucleotides can be used as a source of primers and probes, which can be used for avaitety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer, The polynucleotides can also be used to screen for addingnosis, prognosis and management of colorectal cancer, breast cancer, and lung cancer. The polynucleotides can also be used to screen for peptide analogues and antagonists.

```
The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, namucomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, namicomodulatory activity and activity, increament of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel excretory system related human polymorlaceotides (AAA99567-AAI9953) and the encoded proteins (AAA99913) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy, especially discorders related to the excretory system. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the disgnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastroihestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemlytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's collicis (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. crebala anoxia and epilepsy; and (f) infections diseases such as myocardial ischaemias; and parasitic infections that so this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        894 SerValThrProGluArgMetGluGlyAsnHisLeuHisArgTyrSerLysValLeuGlu 913
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   914 AlaHis------LeuGlyAspProLys-------920

New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders

Disclosure; SEQ ID NO 883; 564pp + Sequence Listing; English.

(AAIG2971-AAIG3793) and the encoded polypeptides (AAM42411-AAM42691) collectively known as kidney antigens and the use of such kidney antigens for detecting disorders of the kidney, especially kidney cancer and kidney cancer metastases. The polynucleotides and proteins are also useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, The invention relates to novel kidney related polynucleotides

Cenomic DNA was isolated from cells of B. subtilis strain QB127 (trpC2 leuA8 sacUh200). The coding region of the aprA gene was sequenced and the results of the sequence are given in AAN80745. The specific clenity of the initial 5 codons of the leader region is attributable to the report of Stahl, et al., J. Bacteriol., 158, 411.418, (1984) and won, et al. P.N.A.S. 81, 1184-1188 (1984). There exist codon sequence differences from Stahl, et al., at amino acid positions 84 and 85. Secondary Stahl, et al., reports a codon GTT (coding for value) appears in AAN80745. Stahl, et al., also reports a codon AGC (coding of position 84 while the codon GTT (coding for value) appears in AAN80745. Stahl, et al., also reports a codon AGC (coding for alamine) in AAN80745. The patent concerns a novel subtilisin an angolew which has an amino acid sequence of a naturally occuring aniogue which has an amino acid sequence of a naturally occuring confilus subtilisin which has been modified by having: one or more of any association by a different amino acid, and concerns an analogue of subtilisin calsaced by a different amino acid, and secondary and analogue of subtilisin Carlsberg, subtilisin and eleted or replaced by a different amino acid, and analogue of subtilisin carlsberg, subtilisin and secondary and broad subtilisin BPN', an applicable and proad subtilisin from B. mesentericus. The subtilisin analogues exhibit improved thermal and ph stabilish BPN', an analogue and proad subcase secondary and broad subcase secondary and analogue and analogue of contracts and analogue schibit improved thermal and ph stabilish.
                                                                                           Coding region of the aprA gene encoding subtilisin in Bacillus subtilis.

                                                                                                            In the example, the inventors inactivate the apr gene by insertion of a functional cat gene coding for chloramphenicol acctyltransferase from 5 aureus. The inserted cat gene confers chloramphenicol resistance, thus facilitating the selection of transformants. The reduced levels of subtilish greatly reduces the likelihood that a secreted forlegn protein will be proteolytically degraded prior to recovery.
                          Bacillus strains with reduced extra-cellular protease levels -useful as hosts for secretion of heterologous polypeptide(s) and

A single 6kb fragment hybridised to a fragment from the C-terminus of the subtlinish structural gene in p54 (see AAN71240). It was ligated to EcoRI-cut pBS42 and the ligation mixture used to transform E.coli ATCC 31446. Plasmid DNA was prepared from a pooled suspension of ATCC 31446. Plasmid DNA was prepared from a protease deficient stransformant colonies and used to transform a protease deficient strans of B.subtlils (BG84). Plasmid DNA from protease producing colonies was digested with EcoRI and examined by Southern blot analysis to isolate the 6kb fragment. A positive clone was identified containing a plasmid designated BS168.1. Three HincII fragments and a HincIII-EcoRI fragment were ligated into M13 vectors and sequenced to obtain the entire subtilisin sequence.

This sequence is the subtilisin gene of Bacillus subtilisin. The subtilisin protein is an alkaline protease which Bacillus secrete. This sequence can be used in the formation of a fusion protein which has an N-terminal subtilisin prosequence linked to a C-terminal non-subtilisin polypeptide. The C-terminal sequence can alternatively be a subtilisin which has an amino acid substitution in one or more of the catalytic triad of this sequence. The mutations take the form of a substitution at amino acid position 221 in the wild type mature protein, where Ser is replaced by Ala: A substitution at thosition 32 in the wild type mature protein may also be used, with the wild type Asp replaced by Asn. A substitution may also be used, with the wild type Asp replaced by Asn. A substitution may alternatively be made at position 64. These mutant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of single-stranded nucleic acid template-mediated recombination and nucleic acid fragment isolation. Methods include polymerase and polymerase-free recombination of nucleic acid fragments to generate chimeric nucleic acid sequences. This method is useful for isolating nucleic acid fragments, combinatorially assembling nucleic acids and for producing chimeric nucleic acids. The method is useful for single stranded nucleic acid template mediated recombination and nucleic acid fragment isolation. Chimeric genes can be generated to produce therapeutic proteins with enhanced activity and vaccines can be produced. The present sequence is subtilisin E DNA, used to generate single-stranded
